

KleverKey OEM Module Micro (BLE).
The quickest way to enter the Smartphone
World for your Product.

KleverKey enables access to your products by using a Smartphone. You can integrate the advanced KleverKey technology in a fast and easy fashion with the new KleverKey OEM Module Micro. Just register a KleverKey compatible module in our cloud and use it with the standard KleverKey App which is downloadable for free from public app stores.

- Control your products with KleverKey using a Smartphone
- Send permissions via the KleverKey App or Cloud, any time and anywhere
- High security through encryption of all data
- Protect your data through Swiss data protection laws

The KleverKey OEM Module Micro is programmed with our OS in your production facilities by means of the KleverKey Create tool. The end user can directly use the product after installation of the free KleverKey App and an initial registration (this includes validation of mobile number and e-mail).

By using KleverKey, you will no longer have to take care of wireless interfaces, security or updating mobile apps for the newest OS releases.

OEM Module Micro (BLE)

The KleverKey compatible Bluetooth module can be easily integrated into your products. With our powerful KleverKey OS, KleverKey Apps and Cloud you get a quick entry into the Smartphone world.
